Ahmedabad, India

WORK EXPERIENCE

ReactJS Developer - MSBC GROUP INDIA PVT LTD - Ahmedabad, India Dec 2025 - Present

(UK, USA, DUBAI, INDIA)

- Internal React Toolkit Development & Adoption** – Worked extensively with the organization’s in-house React Toolkit Library providing reusable components such as configurable buttons, JSON-driven dynamic forms, API handlers, configurable dashboards, and form engines, accelerating development speed and enforcing UI consistency across projects.
- Enterprise UI Architecture using JSON-Driven Forms** – Implemented highly dynamic, schema-based form configurations using JSONFormConfig, enabling rapid creation of complex, validation-rich forms without hardcoding UI logic.
- Configurable Dashboard Framework** – Utilized the toolkit’s configurable dashboard module to build data-driven dashboards with minimal code, supporting scalable UI patterns for enterprise applications.
- UK Client Project – Journeys.AI (Hotel Operations Platform)** – Contributed to a UK-based AI-enabled hotel management platform focused on operational efficiency and staff productivity.
- AI Integration for Quiz & Content Generation** – Integrated AI services to dynamically generate quizzes and contextual content, enhancing user engagement and reducing manual effort.
- Role-Based Access Control (RBAC)** – Implemented fine-grained RBAC to manage permissions across different user roles within the hotel operations system.
- Agile Collaboration & Client Communication** – Worked closely with cross-functional teams in Agile ceremonies including daily stand-ups and weekly client meetings to gather requirements and deliver iterative improvements.
- Advanced Calendar & Event Management System** – Designed and developed a Calendar visualization for operational planning event system supporting: Daily, weekly, monthly, yearly recurring events Multiple event types Edit, update, delete, and repeat functionality

ReactJS Developer - QPAIX INFITECH PVT LTD - Ahmedabad, India June 2024 - Nov 2025

- Asset Management/IoT Integration (IBM Relevance)** - Developed SCADA-related components and specialized IoT device management dashboards (real-time stats, fuel efficiency, job management), demonstrating experience relevant to IBM's Asset Management portfolio.
- Developing Scalable Web Applications** – Designed and implemented highly responsive UI components using React.js, React Bootstrap, and PrimeReact.
- Full-Stack & System Integration** - Contributed to the development of highly responsive UI components and complex business logic, working closely with backend REST APIs for seamless data flow across multiple systems.
- Form & Data Handling** – Developed complex, multi-step dynamic forms with validation and preview features before submission.
- Sidebar & Navigation Enhancement** – Built custom sidebars with expand/collapse functionality and dynamic menu rendering.
- Development** - Designed and implemented advanced features including custom 3D maps for container port tracking and interactive Admin Dashboards.
- Machine Operator Dashboard** – Developed a machine operator dashboard UI featuring real-time stats, fuel efficiency tracking, and job management.

ReactJS Developer - Spectrics Solutions PVT LTD - Ahmedabad, India Oct 2023 - April 2024

- Developing Scalable Web Applications** – Designed and implemented highly responsive UI components using React.js, React Bootstrap, and PrimeReact.
- State Management & API Integration** – Managed global and local states effectively while integrating REST APIs for seamless data flow.
- Dashboard Development** – Created interactive Admin Dashboards with real-time data visualization using charts and tables.

EDUCATION

Bachelor of Computer Applications

Mohanlal Sukhadiya University,Udaipur (Rajasthan)

- Solid Foundation in Computer Science:** Acquired comprehensive knowledge in programming, data structures, algorithms, database management, and software engineering principles, providing a strong foundation for technical roles in IT.

High School

GovtSr.sec.school, Swaroopganj, Sirohi (Rajasthan)

- Completed high school with strong focus on academics and critical thinking.

ADDITIONAL INFORMATION

- TechnicalSkills:** HTML,CSS/SCSS ,JavaScript, **ReactJS**, NodeJS, ExpressJS, Bootstrap, Tailwind CSS, UI/UX, Figma.
- Languages:** English, Hindi
- Certifications:** HTML, CSS, JavaScript Course Certificate + ReactJS Internship Complition Certificate.

PROJECTS

1. Journeys.AI – AI Enabled Hotel Operations Platform

- **Technologies Used :** ReactJS, Internal React Toolkit Library, REST APIs, JSON Schema Forms, RBAC, Calendar Engine, Weather API, AI Integration
- **Description :** Contributed to a UK-based AI-powered hotel operations platform designed to streamline room management, staff coordination, event planning, and operational alerts through configurable dashboards and intelligent automation.

Key Responsibilities :

- Built dynamic, JSON-driven forms using the organization's React Toolkit (JSONFormConfig) to create validation-rich, configurable UIs without hardcoding.
- Implemented Room Management (CRUD) module for tracking room status, availability, and operational updates.
- Developed Role-Based Access Control (RBAC) to manage permissions across hotel staff roles.
- Integrated AI services for quiz and contextual content generation to enhance user engagement and reduce manual work.
- Integrated location-based Weather API to generate real-time alerts for staff and guests.
- Designed and developed a Google Calendar-like Event Management System supporting daily, weekly, monthly, yearly recurring events with edit, update, delete, and repeat functionality.
- Used the toolkit's Configurable Dashboard module to build scalable data-driven dashboards.

Achievements :

- Reduced development time significantly by leveraging reusable toolkit components and JSON-based UI architecture.
 - Delivered a highly configurable and scalable UI architecture adopted across multiple modules of the platform.
-

2. Container Yard Management System

- **Technologies Used :** Java, MySQL, SpringBoot, REST APIs, HTML/CSS, JavaScript
- **Description :** Developed a web-based application for managing container yard operations, tracking containers, and automating yard workflows.

Key Responsibilities :

- Designed and implemented the user interface for container tracking, real-time updates, and status monitoring.
- Created a database schema to store container details, movement logs, and user access history.
- Integrated RESTful APIs for system communication and container status updates.
- Improved container search and filtering, reducing time to locate containers by 30%.
- Implemented security features to ensure secure user authentication and authorization.

Achievements :

- Reduced container yard operation time by 20% through process automation.
 - Increased accuracy in container tracking and improved overall inventory management.
-

3. Smart IoT Software

- **Technologies Used :** ReactJS, Node.js, MQTT, AWS, HTML/CSS, JavaScript, Java, WebSocket
- **Description :** Developed a smart IoT-based solution to monitor and control devices (e.g., temperature, humidity, and light) in real-time via a mobile/web application.

Key Responsibilities :

- Built the firmware for IoT devices using Arduino, enabling sensors to collect environmental data.
- Developed a cloud-based application on AWS to collect, process, and visualize sensor data in real time.
- Implemented a notification system for alerts based on sensor readings (e.g., temperature exceeding limits).
- Designed and developed the web interface for controlling IoT devices remotely.

Achievements :

- Successfully deployed the system in a pilot smart home setup, resulting in improved energy efficiency by 18%.
- Integrated the IoT system with voice assistants (Alexa/Google Assistant) for voice-controlled automation.
